Patent No. 6346510
Regrered INFORMATION:
GENERAL INFORMATION:
APPLICANT: Folkman, Judah
APPLICANT: Folkman, Judah
APPLICANT: O'Reilly, Michael
TITLE OF INVENTION: Therapeutic Antiangiogenic Endostatin Compositions
TITLE OF INVENTION: Therapeutic Antiangiogenic Endostatin Compositions
TURRENT APPLICATION NUMBER: US/09/315,689
CURRENT FILING DATE: 1999-05-20
SOFTWARE: PatentIN Ver. 2.0
SEQ ID NO 4
LENGTH: 546
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       546

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       485
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             201
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               545
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         sProGlyAlaArgIlePheSerPheAspGlyArgAspValLeuGlnHisProAlaTrpPr 161
                                                                                                                                                                                                                                       The invention relates to a recombination virus proliferating in a tumour cell, which can express an anti-oncogene with high efficiency. The invention also relates to the method of its proliferation. A telomerase promoter controlling the transcription of at least one necessary gene for a recombination virus proliferating, can make the virus optionally proliferate in a tumour cell, which has the activity of telomerase and basically does not proliferate in a normal cell without the activity of telomerase. The recombination virus can be used in therapy of many kinds of tumours. This polynucleotide sequence represents a DNA sequence relating to the specific proliferation in a tumour cell of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    65

The invention relates to developing a virus with highly-effective expression of tumour vascular genesis inhibiting factor. The virus comprises a nucleotide sequence encoding the vascular genesis inhibiting factor inserted into a non-essential proliferation region of a virus gene group. The virus selectively proliferates in a tumour cell such that along with replication of virus, the nucleotide sequence copy number of the encoded vascular genesis inhibiting factor is increased. The expression of the vascular genesis inhibiting factor inhibits tumour vascular development and inhibits formation, growth and transfer of tumour. The present sequence is that of a human endostatin polynucleotide

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       61
                                                                                                                                                                                                                                                                                                                                                  The present sequence encodes a human polypeptide which is a potent anglogenesis inhibitor, designated KED. The KED polypeptide, kringle proteins, or a kringle derived from human tissue plasminogen activator (LPA) protein are used to inhibit angiogeneals. Kringle protein, KED or the are useful for treating tumours, as well as atherosclerosis, arthritis, retinopathy and other similar diseases. KED is also useful for the treatment of diseases such as bronchial vascular congestion, inflammatory bowel disease, adult respiratory distress syndrome, castleman's disease, psoriasis, hepatitis, aneurysm, renal disease and haemangiome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AATCCACGGGGGGTCTGGAAAAATTACTGCCGT---AACCCTGATGGTGATGTAGGT

a signal sequence, an immunoglobulin For region, and an anglogenesis inhibitor selected from angiostatin, endostatin, a plasminogen fragment having angiostatin activity, a collagen XVIII fragment having endostatin activity, or combinations of them. The fusion protein (ammunofusin) is used to inhibit angiogenesis and to treat diseases or conditions mediated by angiogenesis. Conditions that may be treated include solid tumours, tumour metastas benign tumours including hacemangiomas, acoustic neuromas, neurofibromas, trachomas and pyrogenic granulomas, rheumatoid arthritis, psoriasis, coular angiogenic diseases of diabetic retinopathy, retinopathy of prematurity, macular degeneration, corneal graft rejection, neovascular glaucoma, retrolental fibroplasia, rubeosis and Osler-Webber syndrome; myocardial angiogenesis, or plaque neovascularisation, telangiectasia, haemophiliac joints' angiofibroma, wound granulation, and excessive or abnormal stimulation of endothelial cells, intestinal cells, atherosclerosis, sclerodermal and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The patent discloses a DNA molecule encoding a fusion protein comprising
